Projects

Home-Lab Projects

Cloud & Cybersecurity Projects (Home Lab | Ubuntu)

- AWS Infrastructure Deployment: Built secure cloud environments with Terraform, applying encryption, IAM, and network controls.
- CI/CD Security: Hardened Jenkins pipeline using secrets management, RBAC, and vulnerability scanning.
- Ubuntu Server Management: Maintained home lab servers with automated updates, access control, and SSH hardening.
- Active Directory Setup: Deployed Samba AD with Kerberos and DNS on Ubuntu for centralized identity management.
- More in the near future
